Abstract by Rosy Lor

This article offers a discussion and critique of the American two-party system. It also analyzes the difficulties third parties face in entering the political arena and provides reasons why third parties enrich political dialogue. The author suggests that the United States should strive for such a multiparty system but doubts it is possible or politically feasible. However, the author concludes by noting that the American party system is broken and hopes the next generation will strive to make choice and representation available to all.
